

nextLI assignment/exercise

A resume and work samples might not be the most comprehensive or illuminating way to present what you can bring to the table — and an internship description might not provide the clearest sense of what you will face on a day-to-day basis either.

Our hope is that with this exercise, you'll get clarity on the latter while providing another occasion for you to portray the former.

Instructions

In this folder, you will find three datasets.

- Child Opportunity Index
 - <http://www.diversitydatakids.org/child-opportunity-index>
- Long Island multifamily housing
 - A list of all proposed, under construction and completed multifamily housing developments on Long Island
- Long Island Railroad Babylon branch ticket sale
 - Ticket sales for 2019 from the LIRR for the Babylon branch

From these datasets, please complete the following exercise:

1. Pick **one** of them to work with, and prepare a sample daily post for our site (something that presents the data and creates an opportunity for conversation).
2. If relevant, create a visualization or interactive to accompany your piece (this can be a wireframe with description).

What to focus on

This is **not** a test on your technical, coding abilities.

We care more about your process, thoughts and questions you come up with as you're working with the dataset.
